

## **Empowering Humanity NGO**

Women's safety is the prime concern in view of the latest incidents that have occurred in various parts of our country. Due to unavailability of proper help, it becomes very difficult for the victim or a person to cope up with the situation. In order to tackle and to avoid any unusual incidences, Empowering Humanity is planning various projects in order to make lives safer.

### **The project involves the following functionalities :**

1. Registration form with minimum details in order to know the details of the person getting enrolled.
  - Name
  - Status: Female / Kid / Senior Citizen
  - DOB
  - Address
  - Profile
  - Emergency Contact Numbers upto 4
2. Smart emergency button to be enabled in order to pass on the details to admin and local team.
3. Live streaming of audio and video in case of emergency along with live location to be enabled

---

### **2<sup>nd</sup> application for the local admin:**

1. Users or enrolled people are to be mapped with the local admin to monitor and extend help in case of emergency.
  2. Emergency button off should be available with the local admin, and can be operated within 10 metres of the person who requested the help.
  3. Feedback form or remarks to be filled by the local admin.
  4. Option to call the next immediate senior in case of emergency.
  5. Emergency case to be escalated to the next higher level in case of no response or delay in response from the local admin.
  6. Local admin can only see the details of the person mapped under him/her.
  7. Option for converting volunteers to local admin in case a person wants to serve the people.
-

### **3<sup>rd</sup> application for super admin:**

1. Data of all users and local admins to be visible.
2. Direct call to an enrolled person through an application.
3. Audit trail availability.
4. Option to transfer or map enrolled members to sub-admin or local admins.

**Note:** Participants should feel free to explore and do their research and add more functionalities as per their understanding to make the project even better.

Participants are expected to present a dummy version of the above explained portal and can take a call upon to create the same as a web application or android application
